3.0 Function Panel

You can change the size of the function panels and the buttons. This improves the readability of the text for use on touch screens, depending on monitor used.

To change the width of the panel, drag and drop the splitter that separates the panel from the worksheet, to the left or right. The size of the button and the font will be automatically adjusted.

If the panel is undocked, adjust the size by turning the mouse wheel.

18.1 Reset Preferences

When you close RedCrab, all major settings are stored in the PC's Windows Registry. Whenever RedCrab is started, these settings are restored. You can reset the settings, when you restart RedCrab with the command line option "/d".
